

Aevi CZ, s.r.o. - Penetration testing

Aevi is in-person payment experts and provide transactions together on one open platform. For Aevi, it is a crucial aspect to operate in the level of business and IT safely. The goal of the cooperation was to increase the level of security of the Aevi's solution.

Unicorn provide penetration testing services to Aevi since 2021. The purpose of the penetration tests is to evaluate Aevi's specific information assets cybersecurity posture.

Success story

Unicorn has performed several penetration test during the cooperation with Aevi. Within the penetration tests we focused mainly on the parts of the payment system. We conducted penetration tests for Aevi of the following targets:

- web applications and APIs,
- infrastructure,
- terminals.

The goal of penetration testing was to discover as much on tested target existing vulnerabilities as possible, prove real exploitability of the vulnerabilities found, and demonstrate proof of concept. The test was performed using the grey box method without knowledge of the source code.

The output of the tests was final report describing vulnerabilities found, their potential impact and specific recommendations on how to mitigate them.

Representative statement of Aevi CZ, s.r.o.

The Unicorn pentest team has proven to be a valuable partner in penetration testing and consultancy in the after-care stage.

We have been performing multiple penetration tests and security analyses for two years, and the cooperation was just excellent. Everyone from the team was helping exceptionally. Speed and precision of pentests are just one of the many perks of the Unicorn Pentest team.

To summarize, a professional team that performs outstanding results.
