

O2 - Service support and minor development Network Inventory

Unicorn Systems Telco has supplied O2 with part of the OSS / Network Inventory solution, on which it has long provided reliable service support and minor development.

Stable support of key operational systems together with flexibility in development changes are the essential parameters of the successful continuous cooperation between O2 and Unicorn Systems Telco, which enables O2 to meet its long-term business goals in providing Internet, data and ICT services to its customers.

Success story

Network Inventory is a digital representation of the network, making it one of the core OSS systems for O2 to support the provision of Internet and data services to its customers from residential, small and medium-sized businesses to large corporations. Unicorn supplied O2 with the original Network Inventory solution, the so-called RTS (Register of Telecommunications Networks).

When O2 Czech Republic was split into two separate entities - O2, focused on services for end customers such as mobile and fixed telephone services, internet and television, and CETIN, specialising in the management and operation of telecommunications networks such as fixed lines, fibre optic cables and mobile transmitters, the need for network registration remained on the part of O2 Czech Republic.

The Unicorn Systems Telco team has since become a permanent partner to support this solution. They ensure its smooth operation, regular service maintenance and minor developments. Our work contributes to the smooth functioning of the telecommunications infrastructure that millions of users rely on every day.

Statement of the O2 representative

"Network Inventory is one of the important areas for us, and it is essential for us to have trusted partners in this area to help us maintain a smooth production run of applications with strict service operational parameters.

To do this, we also need the flexibility to respond to small development change requests. Our long-term and reliable partnership with Unicorn Systems Telco brings all this to us and I am glad that we can rely on them for this."

Prague, 28.02.2025

Radim Musil, Director of IT Service Governance, O2 Czech Republic a.s.

O2 is the largest operator on the Czech market. It provides voice, internet and data services to customers ranging from households to small and medium-sized businesses to large corporations. O2 is also the largest provider of internet for households and businesses, offering 99% of addresses. With its O2 TV service, it is the largest internet TV provider in the Czech Republic. The company is one of the biggest players in hosting and cloud services, as well as in managed services and ICT.
